SUMMARY

Machine Learning Engineer with practical experience in Generative AI, Deep Learning, NLP, and Computer Vision through multiple real-world projects. Previously worked as a Full Stack MERN Developer, building scalable and responsive web applications for over 2 years. Skilled in Python, PyTorch, TensorFlow, Keras, and Scikit-learn with a strong problem-solving background and 350+ solved DSA problems.

PROJECTS

Product Image Classifier | PyTorch, ResNet18, Transfer Learning | [Github](#)

- Built a deep learning image classifier trained on **44,288 fashion product images** across 4 categories.
- Achieved **99.30% validation accuracy** by fine-tuning a pretrained ResNet18 model with transfer learning.
- Implemented model checkpointing, data augmentation, and batch prediction with confidence thresholding.

Twitter Airline Sentiment Analysis | PyTorch, NLP, LSTM, GRU | [Github](#)

- Built a multi-class sentiment classifier on real-world airline tweets, comparing TF-IDF + Logistic Regression against RNN, LSTM, and GRU architectures.
- Demonstrated that a well-tuned TF-IDF + Logistic Regression baseline outperformed RNN, LSTM, and GRU models on final test accuracy, highlighting the importance of strong baselines in NLP.

E-commerce Customer Churn Predictor | Python, Scikit-learn, XGBoost | [Github](#)

- Developed a churn prediction system on a dataset of **6,000 customers** using Logistic Regression, Random Forest, and XGBoost.
- Achieved **97% recall** on churn detection by applying class balancing techniques to handle imbalanced data.
- Performed feature importance analysis, revealing that engagement score and days since last purchase account for **80%+ of churn behaviour**.

EXPERIENCE

MERN Stack Developer

Easyfrontend | Belgium

Aug 2022 - Sep 2023

- Developed 700+ reusable and scalable sections using React, HTML, Tailwind CSS, and Bootstrap.
- Reduced existing codebase size by **7%** through component refactoring and implementation of industry best practices.
- Integrated **10+ third-party REST APIs**, enabling seamless dynamic data flow between frontend interfaces and external services.
- Developed backend logic using NodeJS and ExpressJS, and also managed databases using **MongoDB**

React JS Developer

Staff Asia | Sylhet

Mar 2022 - July 2022

- Converted **80+ Figma and Adobe XD** design files into pixel-perfect, responsive React JS code.
- Built **30+ web pages** across **3 collaborative projects**, contributing to full frontend delivery from design handoff to production.

SKILLS

Languages: C++, Python, JavaScript, TypeScript

AI & ML: PyTorch, TensorFlow, Keras, Scikit-learn, NLP, Computer Vision, Transformers, Generative AI

Web: React.js, Next.js, Node.js, Express.js, MongoDB, Redux

Practices: EDA, Feature Engineering, Model Evaluation, Data Preprocessing

EDUCATION

BSc in Psychology, Sep 2020 - Ongoing, MC College, Sylhet
